

Mathew Deeb

Senior Full-Stack Software Engineer

mdeeb95@gmail.com | 678-906-5036 | github.com/mdeeb95 | linkedin.com/in/mathew-deeb-3768a689

SUMMARY

Senior Software Engineer at Intuit Mailchimp with 10+ years of experience building end-to-end product features across payments infrastructure, observability, and developer tooling. Proven track record shipping high-impact systems at enterprise scale—from unified payment reconciliation pipelines processing millions daily to real-time tax verification serving hundreds of thousands of customers across 200+ regions. Georgia Tech CS grad with deep full-stack experience spanning TypeScript, Python, React, Node, and cloud infrastructure (GCP/AWS). Passionate about building powerful developer tools and shipping fast with high ownership.

EXPERIENCE

Intuit Mailchimp — FinOps Team

Senior Software Engineer | 2022 – Present | Atlanta, GA

- Architected a unified payment reconciliation system that consolidated 5 payment service provider reports (Adyen, Chase, PayPal, Amex, internal) into a single automated pipeline, eliminating a manual accounting process and saving 500+ hours annually
- Built real-time tax ID verification system via FONOAPI integration, validating tax IDs at checkout for hundreds of thousands of customers across 200+ countries and regions
- Developed Taiwan e-invoicing compliance system with FONOAPI, unblocking Mailchimp's operations in the Taiwan market with full observability through automated Slack alerting
- Drove AI adoption across the engineering org, building semi-autonomous end-to-end testing workflows and a team code review agent that accelerated development velocity and code quality
- Built ETL microservices (Python) integrating with legacy bank APIs, staging data in S3 via scheduled jobs and webhooks for downstream financial reporting
- Provided engineering scoping, estimates, and architecture diagrams for a growth experimentation team focused on free-to-paid conversion, achieving a 20% experiment success rate in line with industry benchmarks
- Onboarded and mentored 3 full-time engineers and 1 intern; championed internal adoption of microservice deployment tooling across the engineering org

KollaCode — IBM Events Contractor

Software Engineer | Mar 2020 – 2022

- Owned greenfield application design and architecture end-to-end, taking projects from concept to production as the primary engineer across multiple IBM-contracted applications
- Built CI/CD pipelines from scratch on IBM Hybrid Cloud for multiple applications, replacing a manual VM-based deployment process with automated containerized delivery
- Developed full-stack event management dashboards (Vue, Node, Express) handling data for hundreds of physical and virtual IBM events with tens of thousands of attendees
- Established Git workflows, PR review processes, and code quality standards for a small engineering team

Virtustream (Dell subsidiary)

Software Engineer | May 2014 – Feb 2020 | Alpharetta, GA

- Built cloud infrastructure applications for enterprise customers to analyze resource consumption and compute usage data
 - Developed and maintained an in-house React component library adopted across the engineering team, standardizing UI patterns across multiple applications
 - Managed CI/CD pipelines across development, staging, and production environments for multiple concurrent applications
-

PROJECTS

Natural Language SQL Interface (*Intuit Hackathon Winner*)

- Built an LLM-powered chatbot that enables PMs and data analysts to query terabytes of BigQuery business intelligence data using natural language, with custom tool calling and integrated churn detection model. Currently being adopted internally.

Auto Battler Deck Builder (*Solo Game Dev*)

- Designing and building a solo indie game in Godot using AI-assisted development via Claude Code. Separately prototyping a procedural level generation system by porting a MarkovJunior engine from C# to GDScript.
-

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, PHP, SQL

Frontend: React, Vue.js, HTML/CSS/SCSS, component library development

Backend: Node.js, Express, REST APIs, GraphQL, microservices architecture

Infrastructure: GCP, AWS, Kubernetes, CI/CD pipelines, Docker, S3, BigQuery

Tools & Practices: Git, observability/logging, Agile/Scrum, Jira

AI Development: Claude Code, Anthropic Opus 4.6/4.7, MCP integrations, agentic workflows

EDUCATION

Georgia Institute of Technology — B.S. Computer Science, concentrating in People & User Experiences | 2013 – 2017

INTERESTS

Avid rock climber — outdoor bouldering and newly into outdoor sport climbing. Notable sends: Super Mario V4, Rage V5, Sternum V5. 3D printing enthusiast, retired FPV drone pilot. Getting back into gaming (Path of Exile 2) and exploring game dev via agentic coding.
